

## PHOSPHODIESTERASE 4 INHIBITORS

This application claims the benefit of priority of US provisional application No. 60/427,221, filed November 19, 2002, the entire disclosure of which is hereby

5 incorporated by reference.

### FIELD OF THE INVENTION

The present invention relates generally to the field of phosphodiesterase 4 (PDE4)  
10 enzyme inhibition. More specifically this invention relates to selective PDE4 inhibition by novel compounds, e.g., pyridine N-oxide analogs of *N*-substituted diarylamines, methods of preparing such compounds, compositions containing such compounds, and methods of use thereof.

### 15 BACKGROUND OF THE INVENTION

The cyclic nucleotide specific phosphodiesterases (PDEs) represent a family of enzymes that catalyze the hydrolysis of various cyclic nucleoside monophosphates (including cAMP and cGMP). These cyclic nucleotides act as second messengers within  
20 cells, and as messengers, carry impulses from cell surface receptors having bound various hormones and neurotransmitters. PDEs act to regulate the level of cyclic nucleotides within cells and maintain cyclic nucleotide homeostasis by degrading such cyclic mononucleotides resulting in termination of their messenger role.

25 PDE enzymes can be grouped into eleven families according to their specificity toward hydrolysis of cAMP or cGMP, their sensitivity to regulation by calcium, calmodulin or cGMP, and their selective inhibition by various compounds. For example, PDE 1 is stimulated by  $\text{Ca}^{2+}$ /calmodulin. PDE 2 is cGMP-dependent, and is found in the heart and adrenals. PDE 3 is cGMP-dependent, and inhibition of this enzyme creates  
30 positive inotropic activity. PDE 4 is cAMP specific, and its inhibition causes airway relaxation, antiinflammatory and antidepressant activity. PDE 5 appears to be important

in regulating cGMP content in vascular smooth muscle, and therefore PDE 5 inhibitors may have cardiovascular activity. Since the PDEs possess distinct biochemical properties, it is likely that they are subject to a variety of different forms of regulation.

- 5           PDE4 is distinguished by various kinetic properties including low Michaelis constant for cAMP and sensitivity to certain drugs. The PDE4 enzyme family consists of four genes, which produce 4 isoforms of the PDE4 enzyme designated PDE4A, PDE4B, PDE4C, and PDE4D [See: Wang et al., Expression, Purification, and Characterization of human cAMP-Specific Phosphodiesterase (PDE4) Subtypes A, B, C, and D, *Biochem.*
- 10 *Biophys. Res. Comm.*, 234, 320-324 (1997)]. In addition, various splice variants of each PDE4 isoform have been identified.

- PDE4 isoenzymes are localized in the cytosol of cells and are unassociated with any known membranous structures. PDE4 isoenzymes specifically inactivate cAMP by
- 15 catalyzing its hydrolysis to adenosine 5'-monophosphate (AMP). Regulation of cAMP activity is important in many biological processes, including inflammation and memory. Inhibitors of PDE4 isoenzymes such as rolipram, piclamilast, CDP-840 and ariflo are powerful antiinflammatory agents and therefore may be useful in treating diseases where inflammation is problematic such as asthma or arthritis. Further, rolipram improves the
- 20 cognitive performance of rats and mice in learning paradigms.

**rolipram**

**piclamilast**

In addition to such compounds as rolipram, xanthine derivatives such as pentoxifylline, denbufylline, and theophylline inhibit PDE4 and have received considerable attention of late for their cognition enhancing effects. cAMP and cGMP are second messengers that mediate cellular responses to many different hormones and neurotransmitters. Thus, therapeutically significant effects may result from PDE inhibition and the resulting increase in intracellular cAMP or cGMP in key cells, such as those located in the nervous system and elsewhere in the body.

Rolipram, previously in development as an anti-depressant, selectively inhibits the PDE4 enzyme and has become a standard agent in the classification of PDE enzyme subtypes. Early work in the PDE4 field focused on depression and inflammation, and has subsequently been extended to include indications such as dementia. [see "The PDE IV Family Of Calcium-Phosphodiesterases Enzymes," John A. Lowe, III, et al., *Drugs of the Future* 1992, 17(9):799-807 for a general review). Further clinical developments of rolipram and other first-generation PDE4 inhibitors were terminated due to the side effect profile of these compounds. The primary side effect in primates is emesis, while the primary side effects in rodents are testicular degranulation, weakening of vascular smooth muscle, psychotropic effects, increased gastric acid secretion and stomach erosion.

## **SUMMARY OF THE INVENTION**

The present invention relates to novel compounds, e.g., pyridine N-oxide analogs of *N*-substituted diarylamine compounds, that inhibit PDE4 enzymes, and especially have improved side effect profiles, e.g., are relatively non-emetic, (e.g., as compared to the previously discussed prior art compounds). Preferably, the compounds selectively inhibit PDE4 enzymes. The compounds of this invention at the same time facilitate entry into cells, especially cells of the nervous system.

Still further, the present invention provides methods for synthesizing compounds with such activity and selectivity as well as methods of (and corresponding pharmaceutical compositions for) treating a patient, e.g., mammals, including humans, requiring PDE inhibition, especially PDE4 inhibition, for a disease state that involves

elevated intracellular PDE 4 levels or decreased cAMP levels, e.g., involving neurological syndromes, especially those states associated with memory impairment, most especially long term memory impairment, as where such memory impairment is due in part to catabolism of intracellular cAMP levels by PDE 4 enzymes, or where such

5 memory impairment may be improved by effectively inhibiting PDE4 enzyme activity.

In a preferred aspect, the compounds of the invention improve such diseases by inhibiting PDE4 enzymes at doses which do not induce emesis.

10 The present invention includes nitroxide compounds of Formulas I-III:

wherein

15 one of A, B and D is N-O and the others are CR<sup>6</sup> (preferably, B is N-O)

$R^1$  is alkyl having 1 to 4 carbon atoms, which is branched or unbranched and which is unsubstituted or substituted one or more times by halogen (e.g.,  $CH_3$ ,  $CHF_2$ ,  $CF_3$ , etc.);

$R^2$  is alkyl having 1 to 12, preferably 1 to 8 carbon atoms, which is branched or unbranched and which is unsubstituted or substituted one or more times by halogen, hydroxy, cyano,  $C_{1-4}$ -alkoxy, oxo or combinations thereof, and wherein optionally one or more  $-CH_2CH_2-$  groups is replaced in each case by  $-CH=CH-$  or  $-C\equiv C-$  (e.g.,  $CH_3$ ,  $CHF_2$ ,  $CF_3$ , methoxyethyl, etc.),

cycloalkyl having 3 to 10, preferably 3 to 8 carbon atoms, which is unsubstituted or substituted one or more times by halogen, hydroxy, oxo, cyano, alkyl having 1 to 4 carbon atoms, alkoxy having 1 to 4 carbon atoms, or combinations thereof (e.g., cyclopentyl),

cycloalkylalkyl having 4 to 16, preferably 4 to 12 carbon atoms, which is unsubstituted or substituted in the cycloalkyl portion and/or the alkyl portion one or more times by halogen, oxo, cyano, hydroxy,  $C_{1-4}$ -alkyl,  $C_{1-4}$ -alkoxy or combinations thereof (e.g., cyclopentylmethyl, cyclopropylmethyl, etc.),

aryl having 6 to 14 carbon atoms, which is unsubstituted or substituted one or more times by halogen,  $CF_3$ ,  $OCF_3$ , alkyl, hydroxy, alkoxy, nitro, methylenedioxy, ethylenedioxy, cyano, or combinations thereof (e.g., methylphenyl, methoxyphenyl, chlorophenyl, etc.),

arylalkyl in which the aryl portion has 6 to 14 carbon atoms and the alkyl portion, which is branched or unbranched, has 1 to 5 carbon atoms, wherein the arylalkyl radical is unsubstituted or is substituted in the aryl portion one or more times by halogen,  $CF_3$ ,  $OCF_3$ , alkyl, hydroxy, alkoxy,

5                   nitro, cyano, methylenedioxy, ethylenedioxy, or combinations thereof, and  
                   wherein in the alkyl portion one or more  $\text{-CH}_2\text{CH}_2\text{-}$  groups are each  
                   optionally replaced by  $\text{-CH=CH-}$  or  $\text{-C}\equiv\text{C-}$ , and/or one or more  $\text{-CH}_2\text{-}$   
                   groups are each optionally replaced by  $\text{-O-}$  or  $\text{-NH-}$  and/or the alkyl  
 10                   portion is optionally substituted by halogen, oxo, hydroxy, cyano, or  
                   combinations thereof (e.g., phenylethyl, phenylpropyl, phenylbutyl,  
                   methoxyphenylethyl, methoxyphenylpropyl, chlorophenylethyl,  
                   chlorophenylpropyl, phenylethenyl, phenoxyethyl, phenoxybutyl,  
                   chlorophenoxyethyl, chlorophenylaminoethyl, etc.),  
 15                   a partially unsaturated carbocyclic group having 5 to 14 carbon atoms,  
                   which is unsubstituted or substituted one or more times by halogen, alkyl,  
                   alkoxy, hydroxy, nitro, cyano, oxo, or combinations thereof (e.g.,  
                   cyclohexenyl, cyclohexadienyl, indanyl, tetrahydronaphthenyl, etc.),  
 20                   a heterocyclic group, which is saturated, partially saturated or unsaturated,  
                   having 5 to 10 ring atoms in which at least 1 ring atom is an N, O or S  
                   atom, wherein the heterocyclic group is unsubstituted or substituted one or  
                   more times by halogen, hydroxy, aryl, alkyl, alkoxy, cyano,  
                   trifluoromethyl, nitro, oxo, or combinations thereof (e.g., 3-thienyl, 3-  
                   tetrahydrofuranyl, 3-pyrrolyl, etc.), or  
 25                   a heterocycle-alkyl group, wherein the heterocyclic portion is saturated,  
                   partially saturated or unsaturated, and has 5 to 10 ring atoms in which at  
                   least 1 ring atom is an N, O or S atom, and the alkyl portion is branched or  
                   unbranched and has 1 to 5 carbon atoms, the heterocycle-alkyl group is  
                   unsubstituted or substituted one or more times in the heterocyclic portion  
                   by halogen,  $\text{OCF}_3$ , hydroxy, aryl, alkyl, alkoxy, cyano, trifluoromethyl,  
                   nitro, oxo, or combinations thereof, wherein in the alkyl portion one or  
 30                   more  $\text{-CH}_2\text{CH}_2\text{-}$  groups are each optionally replaced by  $\text{-CH=CH-}$  or  
                    $\text{-C}\equiv\text{C-}$ , and/or one or more  $\text{-CH}_2\text{-}$  groups are each optionally replaced by -

hydroxymethyl), hydroxamic acid, tetrazole-5-yl, hydroxyalkoxy, carboxy, alkoxycarbonyl (e.g., tert-butyloxycarbonyl, ethoxycarbonyl), cyano, acyl, alkylthio, alkylsulfinyl, alkylsulfonyl, phenoxy, trialkylsilyloxy (e.g. *tert*-butyldimethylsilyloxy), R<sup>4</sup>-L-, or combinations thereof (e.g., pyridyl, thienyl, pyrazinyl, quinolinyl, isoquinolinyl, pyrimidinyl, imidazolyl, thiazolyl, etc.), or

a heterocyclic group, which is saturated, partially saturated or unsaturated, having 5 to 10 ring atoms in which at least 1 ring atom is an N, O or S atom, which is unsubstituted or substituted one or more times by halogen, hydroxy, aryl, alkyl, alkoxy, cyano, trifluoromethyl, nitro, oxo, or combinations thereof (e.g., 3-thienyl, 3-tetrahydrofuranyl, 3-pyrrolyl, etc.);

R<sup>4</sup> is H,

alkyl having 1 to 8, preferably 1 to 4 carbon atoms, which is unsubstituted or substituted one or more times by halogen, C<sub>1-4</sub>-alkyl, C<sub>1-4</sub>-alkoxy, oxo, or combinations thereof (e.g., methyl, ethyl, propyl, etc.),

alkylamino or dialkylamino wherein each alkyl portion has independently 1 to 8, preferably 1 to 4 carbon atoms (e.g., dimethylamino, etc.),

a partially unsaturated carbocycle-alkyl group wherein the carbocyclic portion has 5 to 14 carbon atoms and the alkyl portion has 1 to 5 carbon atoms, which is unsubstituted or substituted, preferably in the carbocyclic portion, one or more times by halogen, alkyl, alkoxy, nitro, cyano, oxo, or combinations thereof (e.g., cyclohexenylmethyl, etc.),

cycloalkyl having 3 to 10, preferably 3 to 8 carbon atoms, which is unsubstituted or substituted one or more times by halogen, hydroxy, oxo,

cyano, alkoxy, alkyl having 1 to 4 carbon atoms, or combinations thereof (e.g., cyclopentyl),

5 cycloalkylalkyl having 4 to 16, preferably 4 to 12 carbon atoms, which is unsubstituted or substituted in the cycloalkyl portion and/or the alkyl portion one or more times by halogen, oxo, cyano, hydroxy, alkyl, alkoxy or combinations thereof (e.g., cyclopentylmethyl, cyclopropylmethyl, etc.),

10 aryl having 6 to 14 carbon atoms and which is unsubstituted or substituted one or more times by halogen, alkyl, hydroxy, alkoxy, alkoxyalkoxy, nitro, methylenedioxy, ethylenedioxy, trifluoromethyl, amino, aminomethyl, aminoalkyl, aminoalkoxy, dialkylamino, hydroxyalkyl (e.g., hydroxymethyl), hydroxamic acid, tetrazole-5-yl, hydroxyalkoxy, 15 carboxy, alkoxycarbonyl (e.g., tert-butyloxycarbonyl, ethoxycarbonyl), cyano, acyl, alkylthio, alkylsulfinyl, alkylsulfonyl, phenoxy, cycloalkyl, aryl (e.g., phenyl, naphthyl, and biphenyl), heteroaryl, or combinations thereof (e.g., substituted or unsubstituted phenyl and naphthyl, methylphenyl, chlorophenyl, fluorophenyl, vinylphenyl, cyanophenyl, 20 methylenedioxophenyl, ethylphenyl, dichlorophenyl, carboxyphenyl, ethoxycarbonylphenyl, dimethylphenyl, hydroxymethylphenyl, nitrophenyl, aminophenyl, etc.),

25 arylalkyl having 7 to 19 carbon atoms, wherein the aryl portion has 6 to 14 carbon atoms and the alkyl portion, which is branched or unbranched, has 1 to 5 carbon atoms, wherein the arylalkyl radical is unsubstituted or substituted, in the aryl portion, one or more times by halogen, trifluoromethyl, CF<sub>3</sub>O, nitro, amino, alkyl, alkoxy, amino, alkylamino, dialkylamino, or combinations thereof, and/or substituted in the alkyl 30 portion by halogen, cyano, methyl, or combinations thereof, wherein in the alkyl portion one or more -CH<sub>2</sub>CH<sub>2</sub>- groups are each optionally replaced

- by -CH=CH- or -C≡C-, and/or one or more -CH<sub>2</sub>- groups are each optionally replaced by -O- or -NH- (e.g., benzyl, phenethyl, phenpropyl, methylbenzyl, methoxybenzyl, trifluoromethyl, benzyl, methylenedioxybenzyl, etc.),
- 5 a heterocyclic group, which is saturated, partially saturated or unsaturated, having 5 to 10 ring atoms in which at least 1 ring atom is an N, O or S atom, which is unsubstituted or substituted one or more times by halogen, alkyl, hydroxy, alkoxy, alkoxyalkoxy, nitro, methylenedioxy,
- 10 ethylenedioxy, trifluoromethyl, amino, aminomethyl, aminoalkyl, aminoalkoxy dialkylamino, hydroxyalkyl (e.g., hydroxymethyl), hydroxamic acid, tetrazole-5-yl, hydroxyalkoxy, carboxy, alkoxycarbonyl (e.g., tert-butyloxycarbonyl, ethoxycarbonyl), cyano, acyl, alkylthio, alkylsulfinyl, alkylsulfonyl, phenoxy, or combinations thereof (e.g.,
- 15 pyridyl, thienyl, pyrazinyl, quinoliny, isoquinoliny, pyrimidinyl, imidazolyl, thiazolyl, etc.), or
- a heterocycle-alkyl group, wherein the heterocyclic portion is saturated, partially saturated or unsaturated, and has 5 to 10 ring atoms in which at least 1 ring atom is a N, O or S atom, and the alkyl portion which is
- 20 branched or unbranched and has 1 to 5 carbon atoms, the heterocycle-alkyl group is unsubstituted or substituted one or more times in the heterocyclic portion by halogen, alkyl, alkoxy, cyano, trifluoromethyl, CF<sub>3</sub>O, nitro, oxo, amino, alkylamino, dialkylamino, or combinations thereof and/or
- 25 substituted in the alkyl portion by halogen, cyano, or methyl or combinations thereof (e.g., pyridylmethyl, pyridylpropyl, methylpyridylmethyl, etc.);
- L is a single bond or a divalent aliphatic radical having 1 to 8 carbon atoms
- 30 wherein one or more -CH<sub>2</sub>- groups are each optionally replaced by -O-, -S-, -SO-, -SO<sub>2</sub>-, -NR<sup>5</sup>-, -SO<sub>2</sub>NH-, -NHSO<sub>2</sub>-, -SO<sub>2</sub>NR<sup>5</sup>-, -NR<sup>5</sup>SO<sub>2</sub>-, -CO-,

5                   -NR<sup>5</sup>CO-, -CONR<sup>5</sup>-, -NHCONH-, -OCONH-, -NHCOO-, -SCONH-, -SCSNH-, or -NHCSNH- (e.g., -O-, CH<sub>2</sub>-, -CO-, -CO-O-, -O-CO-, -CO-NH-, -NH-CO-, -CH<sub>2</sub>CH<sub>2</sub>CH<sub>2</sub>-NH-CO-, -CH<sub>2</sub>-CH<sub>2</sub>-O-, -SO<sub>2</sub>-NH-CH<sub>2</sub>CH<sub>2</sub>-O-, -O-CH<sub>2</sub>CH<sub>2</sub>-O-, -CH<sub>2</sub>-NH-CO-, -CO-NH-CH<sub>2</sub>-, -SO<sub>2</sub>-NH-, -CH<sub>2</sub>-NH-SO<sub>2</sub>-, -CH<sub>2</sub>CH<sub>2</sub>CH<sub>2</sub>-SO<sub>2</sub>-NH-, -CO-NH-SO<sub>2</sub>-, -SO<sub>2</sub>-, -SO<sub>2</sub>NHCO-, etc.);

R<sup>5</sup>       is H,

10               alkyl having 1 to 8, preferably 1 to 4 carbon atoms, which is branched or unbranched and which is unsubstituted or substituted one or more times by halogen, C<sub>1-4</sub>-alkyl, C<sub>1-4</sub>-alkoxy, oxo, or combinations thereof (e.g., methyl, ethyl, propyl, etc.),

15               aryl having 6 to 14 carbon atoms and which is unsubstituted or substituted one or more times by halogen, alkyl, hydroxy, alkoxy, alkoxyalkoxy, nitro, methylenedioxy, ethylenedioxy, trifluoromethyl, amino, aminomethyl, aminoalkyl, aminoalkoxy dialkylamino, hydroxyalkyl (e.g., hydroxymethyl), hydroxamic acid, tetrazole-5-yl, hydroxyalkoxy,  
20               carboxy, alkoxycarbonyl (e.g., tert-butyloxycarbonyl, ethoxycarbonyl), cyano, acyl, alkylthio, alkylsulfinyl, alkylsulfonyl, (e.g., substituted or unsubstituted phenyl and naphthyl, methylphenyl, chlorophenyl, fluorophenyl, vinylphenyl, cyanophenyl, methylenedioxophenyl, ethylphenyl, dichlorophenyl, carboxyphenyl, ethoxycarbonylphenyl,  
25               dimethylphenyl, hydroxymethylphenyl, nitrophenyl, aminophenyl, etc.),  
or

arylalkyl having 7 to 19 carbon atoms, wherein the aryl portion has 6 to 14 carbon atoms and the alkyl portion, which is branched or unbranched, has

1 to 5 carbon atoms, wherein the arylalkyl radical is unsubstituted or substituted, in the aryl portion, one or more times by halogen, trifluoromethyl, CF<sub>3</sub>O, nitro, amino, alkyl, alkoxy, amino, alkylamino, dialkylamino, or combinations thereof, and/or substituted in the alkyl portion by halogen, cyano, methyl, or combinations thereof, wherein in the alkyl portion one or more -CH<sub>2</sub>CH<sub>2</sub>- groups are each optionally replaced by -CH=CH- or -C≡C-, and/or one or more -CH<sub>2</sub>- groups are each optionally replaced by -O- or -NH- (e.g., benzyl, phenethyl, phenpropyl, methylbenzyl, methoxybenzyl, trifluoromethyl, benzyl, methylenedioxobenzyl, etc.);

R<sup>6</sup> is H, halogen, alkyl having 1 to 4 carbon atoms, alkoxy having 1 to 4 carbon atoms, CN, or hydroxyl;

R<sup>7</sup> is H,

alkyl having 1 to 8 carbon atoms, which is branched or unbranched and which is unsubstituted or substituted one or more times by halogen, cyano, hydroxy, C<sub>1-4</sub>-alkoxy, or combinations thereof

cycloalkyl having 3 to 10, preferably 3 to 8 carbon atoms, which is unsubstituted or substituted one or more times by halogen, hydroxy, oxo, cyano, alkyl having 1 to 4 carbon atoms, alkoxy having 1 to 4 carbon atoms, or combinations thereof (e.g., cyclopentyl),

cycloalkylalkyl having 4 to 16, preferably 4 to 12 carbon atoms, which is unsubstituted or substituted in the cycloalkyl portion and/or the alkyl portion one or more times by halogen, oxo, cyano, hydroxy, C<sub>1-4</sub>-alkyl, C<sub>1-4</sub>-alkoxy or combinations thereof (e.g., cyclopentylmethyl, cyclopropylmethyl, etc.),

5 aryl having 6 to 14 carbon atoms, which is unsubstituted or substituted one or more times by halogen, CF<sub>3</sub>, OCF<sub>3</sub>, alkyl, hydroxy, alkoxy, nitro, methylenedioxy, ethylenedioxy, cyano, or combinations thereof (e.g., methylphenyl, methoxyphenyl, chlorophenyl, etc.),

10 arylalkyl in which the aryl portion has 6 to 14 carbon atoms and the alkyl portion, which is branched or unbranched, has 1 to 5 carbon atoms, wherein the arylalkyl radical is unsubstituted or is substituted in the aryl portion one or more times by halogen, CF<sub>3</sub>, OCF<sub>3</sub>, alkyl, hydroxy, alkoxy, nitro, cyano, methylenedioxy, ethylenedioxy, or combinations thereof, and wherein in the alkyl portion one or more -CH<sub>2</sub>CH<sub>2</sub>- groups are each optionally replaced by -CH=CH- or -C≡C-, and/or one or more -CH<sub>2</sub>- groups are each optionally replaced by -O- or -NH- and/or the alkyl

15 portion is optionally substituted by halogen, oxo, hydroxy, cyano, or combinations thereof (e.g., phenylethyl, phenylpropyl, phenylbutyl, methoxyphenylethyl, methoxyphenylpropyl, chlorophenylethyl, chlorophenylpropyl, phenylethenyl, phenoxyethyl, phenoxybutyl, chlorophenoxyethyl, chlorophenylaminoethyl, etc.),

20 a heterocyclic group, which is saturated, partially saturated or unsaturated, having 5 to 10 ring atoms in which at least 1 ring atom is an N, O or S atom, which is unsubstituted or substituted one or more times by halogen, alkyl, hydroxy, alkoxy, alkoxyalkoxy, nitro, methylenedioxy, ethylenedioxy, trifluoromethyl, amino, aminomethyl, aminoalkyl,

25 aminoalkoxy dialkylamino, hydroxyalkyl (e.g., hydroxymethyl), hydroxamic acid, tetrazole-5-yl, hydroxyalkoxy, carboxy, alkoxycarbonyl (e.g., tert-butyloxycarbonyl, ethoxycarbonyl), cyano, acyl, alkylthio, alkylsulfinyl, alkylsulfonyl, phenoxy, or combinations thereof (e.g., tetrahydrofuranyl, pyridyl, thienyl, pyrazinyl, quinolinyl, isoquinolinyl,

30 pyrimidinyl, imidazolyl, thiazolyl, etc.), or

5 a heterocycle-alkyl group, wherein the heterocyclic portion is saturated,  
 partially saturated or unsaturated, and has 5 to 10 ring atoms in which at  
 least 1 ring atom is an N, O or S atom, and the alkyl portion is branched or  
 unbranched and has 1 to 5 carbon atoms, the heterocycle-alkyl group is  
 unsubstituted or substituted one or more times in the heterocyclic portion  
 by halogen, OCF<sub>3</sub>, hydroxy, aryl, alkyl, alkoxy, cyano, trifluoromethyl,  
 10 nitro, oxo, or combinations thereof, wherein in the alkyl portion one or  
 more -CH<sub>2</sub>CH<sub>2</sub>- groups are each optionally replaced by -CH=CH- or  
 -C≡C-, and/or one or more -CH<sub>2</sub>- groups are each optionally replaced by -  
 O- or -NH- and/or the alkyl portion is optionally substituted by halogen,  
 oxo, hydroxy, cyano, or combinations thereof (e.g., pyridylethyl,  
 pyridylpropyl, methylpiperazinylethyl, etc.);

15 R<sup>8</sup> is H, or

20 alkyl having 1 to 4 carbon atoms, which is branched or unbranched and  
 which is unsubstituted or substituted one or more times by halogen, cyano,  
 and/or C<sub>1-4</sub>-alkoxy (e.g., CH<sub>3</sub>, C<sub>2</sub>H<sub>5</sub>, CHF<sub>2</sub>, CF<sub>3</sub>, etc.), and one or more -  
 CH<sub>2</sub>CH<sub>2</sub>- groups can be replaced in each case by -CH=CH- or -C≡C-;

25 R<sup>9</sup> is alkoxy or alkylthio, in each case having 1 to 4 carbon atoms, which is  
 branched or unbranched and which is unsubstituted or substituted one or  
 more times by halogen (e.g., OCH<sub>3</sub>, OCHF<sub>2</sub>, OCF<sub>3</sub>, etc.);

$R^{10}$  is  $-\text{CO}-\text{C}_{1-4}$ -alkyl which is branched or unbranched and which is unsubstituted or substituted one or more times by halogen (e.g.,  $\text{CH}_3$ ,  $\text{CHF}_2$ ,  $\text{CF}_3$ , etc.), or is

;

5

$R^{11}$  is H or alkyl having 1 to 4 carbon atoms, which is branched or unbranched, and which is unsubstituted or substituted one or more times by halogen (e.g.,  $\text{CH}_3$ ,  $\text{CHF}_2$ ,  $\text{CF}_3$ , etc.);

10

$R^{12}$  is alkyl having 1 to 6 carbon atoms, which is branched or unbranched, and which is unsubstituted or substituted one or more times by halogen (e.g.,  $\text{CH}_3$ ,  $\text{CHF}_2$ ,  $\text{CF}_3$ , etc.);

15

$R^{13}$  is alkyl having 1 to 6 carbon atoms, which is branched or unbranched, and which is unsubstituted or substituted one or more times by halogen (e.g.,  $\text{CH}_3$ ,  $\text{CHF}_2$ ,  $\text{CF}_3$ , etc.);

X and Y are each independently O or S; and

20

G is alkylene having 2 to 7 carbon atoms which is unsubstituted or substituted one or more times by halogen; and

pharmaceutically acceptable salts thereof;

25

wherein optically active compounds can be in the form of one of their separate enantiomers or in the form of mixtures thereof, including racemic mixtures.

Corresponding compounds in which the N atom of the pyridyl ring is not in nitroxide form are disclosed in related applications Serial No. 10/051,309, filed January 22, 2002, Serial No. 60/396,726, filed July 19, 2002, and Serial No. 10/622,117, filed  
5 July 18, 2003, the entire disclosures of which are incorporated herein by reference.

The compounds of the present invention are effective in inhibiting, or modulating the activity of PDE4 in animals, e.g., mammals, especially humans. These compounds exhibit neurological activity, especially where such activity affects cognition, including  
10 long term memory. These compounds will also be effective in treating diseases where decreased cAMP levels are involved. This includes but is not limited to inflammatory diseases. These compounds may also function as antidepressants, or be useful in treating cognitive and negative symptoms of schizophrenia.

15 Assays for determining PDE inhibiting activity as well as selectivity of PDE 4 inhibiting activity and selectivity of inhibiting PDE 4 isoenzymes are known within the art. See, e.g., US 6,136,821, the disclosure of which is incorporated herein by reference.

According to a further aspect of the invention there are provided compounds  
20 useful as intermediates for the production of the PDE4 inhibitors described herein (e.g., PDE4 inhibitors of Formulas I-III) and/or useful for the synthesis of radio-labeled analogs of the PDE4 inhibitors with in this application.

Thus, there are provided intermediate compounds which correspond to  
25 compounds of Formula I, wherein  $R^2$  and  $R^3$  are as previously defined for Formula I, but  $R^1$  is H, tert-butyldimethylsilyl-, or a suitable phenolic protecting group. Suitable phenolic protecting groups are described, for example, in Greene, T.W. and Wuts, P.G.M., Protective Groups in Organic Synthesis, 3<sup>rd</sup> Edition, John Wiley & Sons, 1999, pp. 246-293. These intermediates are also useful for the synthesis of radio-labeled  
30 compounds, such as where  $R^1$  is  $^3\text{H}_3\text{C}$ -,  $^{14}\text{CH}_3$ -, or  $^{11}\text{CH}_3$ -, for example by removing the

protecting group and reacting the resultant compound in which R<sup>1</sup> is H with suitable radio-labelled reagents. Such radio-labeled compounds are useful for determining compound tissue distribution in animals, in PET imaging studies, and for in vivo, ex vivo, and in vitro binding studies.

5

Also provided are intermediate compounds which correspond to compounds of Formula I, wherein R<sup>1</sup> and R<sup>3</sup> are as previously defined for Formula I, but R<sup>2</sup> is H, tert-butyltrimethylsilyloxy-, or a suitable phenolic protecting group. Suitable phenolic protecting groups are described, for example, in Greene, T.W. and Wuts, P.G.M., Protective Groups in Organic Synthesis, 3<sup>rd</sup> Edition, John Wiley & Sons, 1999, pp. 246-293. Compounds in which R<sup>2</sup> is H are useful as intermediates, for example, as scaffolds for parallel or combinatorial chemistry applications. Further, these compounds are useful for the introduction of radio-labels such as <sup>3</sup>H, <sup>14</sup>C, or <sup>11</sup>C.

Other preferred intermediates are compounds that are in accordance with any one of Formulas I-III, except that R<sup>3</sup> is H. Additional radio-labeled compounds that are useful for determining compound tissue distribution in animals, in PET imaging studies, and for in vivo, ex vivo, and in vitro binding studies are compounds according to Formulas I-III wherein R<sup>3</sup> is aryl and the aryl structure contains a <sup>14</sup>C atom in the ring, as well as compounds of Formula III in which R<sup>9</sup> is OCH<sub>3</sub> in which the C atom is <sup>14</sup>C or at least one of the H atoms is <sup>3</sup>H.

Halogen herein refers to F, Cl, Br, and I. Preferred halogens are F and Cl.

Alkyl, as a group or substituent per se or as part of a group or substituent (e.g., alkylamino, trialkylsilyloxy, aminoalkyl, hydroxyalkyl), means generally a straight-chain or branched-chain aliphatic hydrocarbon radical having, for example, 1 to 12 carbon atoms, preferably 1 to 8 carbon atoms, especially 1 to 4 carbon atoms. Suitable alkyl

groups include methyl, ethyl, propyl, isopropyl, butyl, sec-butyl, tert-butyl, pentyl, hexyl, heptyl, octyl, nonyl, decyl, undecyl, and dodecyl. Other examples of suitable alkyl groups include 1-, 2- or 3-methylbutyl, 1,1-, 1,2- or 2,2-dimethylpropyl, 1-ethylpropyl, 1-, 2-, 3- or 4-methylpentyl, 1,1-, 1,2-, 1,3-, 2,2-, 2,3- or 3,3-dimethylbutyl, 1- or 2-ethylbutyl, ethylmethylpropyl, trimethylpropyl, methylhexyl, dimethylpentyl, ethylpentyl, ethylmethylbutyl, dimethylbutyl, and the like.

Substituted alkyl groups are alkyl groups as described above which are substituted in one or more positions by, for example, halogens, oxo, hydroxyl, C<sub>1-4</sub>-alkoxy and/or cyano. Halogens are preferred substituents, especially F and Cl.

Alkoxy means alkyl-O- groups and alkoxyalkoxy means alkyl-O-alkyl-O- groups in which the alkyl portions are in accordance with the previous discussion. Suitable alkoxy and alkoxyalkoxy groups include methoxy, ethoxy, propoxy, butoxy, pentoxy, hexoxy, heptoxy, octoxy methoxymethoxy ethoxymethoxy, propoxymethoxy, and methoxyethoxy. Preferred alkoxy groups are methoxy and ethoxy. Similarly, alkoxycarbonyl means alkyl -O-CO- in which the alkyl portion is in accordance with the previous discussion. Examples include methoxycarbonyl, ethoxycarbonyl, propoxycarbonyl, and tert-butoxycarbonyl.

Cycloalkyl means a monocyclic, bicyclic or tricyclic nonaromatic saturated hydrocarbon radical having 3 to 10 carbon atoms, preferably 3 to 8 carbon atoms, especially 3 to 6 carbon atoms. Suitable cycloalkyl groups include cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl, cyclooctyl, norbornyl, 1-decalin, adamant-1-yl, and adamant-2-yl. Other suitable cycloalkyl groups include spiro[2.4]heptyl, bicyclo[2.1.0]pentyl, bicyclo[3.1.0]hexyl, spiro[2.5]octyl, bicyclo[5.1.0]octyl, spiro[2.6]nonyl, bicyclo[2.2.0]hexyl, spiro[3.3]heptyl, bicyclo[4.2.0]octyl, and spiro[3.5]nonyl. Preferred cycloalkyl groups are cyclopropyl,

cyclopentyl and cyclohexyl. The cycloalkyl group can be substituted, for example, substituted by halogens and/or alkyl groups.

5 Cycloalkylalkyl refers to cycloalkyl-alkyl radicals in which the cycloalkyl and alkyl portions are in accordance with previous discussions. Suitable examples include cyclopropylmethyl and cyclopentylmethyl.

Aryl, as a group or substituent per se or as part of a group or substituent, refers to an aromatic carbocyclic radical containing 6 to 14 carbon atoms, preferably 6 to 12  
10 carbon atoms, especially 6 to 10 carbon atoms. Suitable aryl groups include phenyl, naphthyl and biphenyl. Substituted aryl groups include the above-described aryl groups which are substituted one or more times by, for example, halogen, alkyl, hydroxy, alkoxy, nitro, methylenedioxy, ethylenedioxy, amino, alkylamino, dialkylamino, hydroxyalkyl, hydroxyalkoxy, carboxy, cyano, acyl, alkoxycarbonyl, alkylthio,  
15 alkylsulfinyl, alkylsulfonyl, and phenoxy.

Arylalkyl refers to an aryl-alkyl-radical in which the aryl and alkyl portions are in accordance with the previous descriptions. Suitable examples include benzyl, 1-phenethyl, 2-phenethyl, phenpropyl, phenbutyl, phenpentyl, and naphthylmethyl.  
20

Heteroaryl refers to an aromatic heterocyclic group having one or two rings and a total number of 5 to 10 ring atoms wherein at least one of the ring atoms is a heteroatom. Preferably, the heteroaryl group contains 1 to 3, especially 1 or 2, hetero-ring atoms which are selected from N, O and S. Suitable heteroaryl groups include furyl, thienyl,  
25 pyrrolyl, pyrazolyl, imidazolyl, triazolyl, tetrazolyl, dithialyl, oxathialyl, isoxazolyl, oxazolyl, thiazolyl, isothiazolyl, oxadiazolyl, oxatriazolyl, dioxazolyl, oxathiazolyl, thiadiazolyl, pyridyl, pyridazinyl, pyrimidinyl, pyrazinyl, triazinyl, oxazinyl, isoxazinyl, oxathiazinyl, oxadiazinyl, benzofuranyl, isobenzofuranyl, thionaphthenyl, isothionaphthenyl, indolyl, isoindolyl, indazolyl, benzisoxazolyl, benzoxazolyl,  
30 benzthiazolyl, benzisothiazolyl, purinyl, benzopyranyl, quinolinyl, isoquinolinyl, cinnolinyl, quinazolinyl, naphthyridinyl, and benzoxazinyl, e.g., 2-thienyl, 3-thienyl, 2-,

3- or 4-pyridyl, 2-, 3-, 4-, 5-, 6-, 7- or 8-quinolinyl, and 1-, 3-, 4-, 5-, 6-, 7- or 8-isoquinolinyl.

Substituted heteroaryl refers to the heteroaryl groups described above which are substituted in one or more places by, for example, halogen, aryl, alkyl, alkoxy, carboxy, methylene, cyano, trifluoromethyl, nitro, oxo, amino, alkylamino, and dialkylamino.

Heterocycles include heteroaryl groups as described above as well as non-aromatic cyclic groups containing at least one hetero-ring atom, preferably selected from N, S and O, for example, tetrahydrofuranyl, piperidinyl, and pyrrolidinyl.

Heterocycle-alkyl refers to a heterocycle-alkyl-group wherein the heterocyclic and alkyl portions are in accordance with the previous discussions. Suitable examples are pyridylmethyl, thienylmethyl, pyrimidinylmethyl, pyrazinylmethyl, and isoquinolinylmethyl.

Partially unsaturated carbocyclic structures are non-aromatic monocyclic or bicyclic structures containing 5 to 14 carbon atoms, preferably 6 to 10 carbon atoms, wherein the ring structure(s) contains at least one C=C bond. Suitable examples are cyclopentenyl, cyclohexenyl, cyclohexadienyl, tetrahydronaphthenyl and indan-2-yl.

Alkenyl refers to straight-chain or branched-chain aliphatic radicals containing 2 to 12 carbon atoms in which one or more -CH<sub>2</sub>-CH<sub>2</sub>- structures are each replaced by -CH=CH-. Suitable alkenyl groups are ethenyl, 1-propenyl, 2-methylethenyl, 1-butene, 2-butene, 1-pentenyl, and 2-pentenyl.

Alkynyl refers to straight-chain or branched-chain aliphatic radicals containing 2 to 12 carbon atoms in which one or more -CH<sub>2</sub>-CH<sub>2</sub>- structures are each replaced by -C≡C-. Suitable alkynyl groups are ethynyl, propynyl, 1-butyne, and 2-butyne.

Acyl refers to alkanoyl radicals having 1 to 13 carbon atoms in which the alkyl portion can be substituted by halogen, alkyl, aryl and/or alkoxy, or aroyl radicals having 7 to 15 carbon atoms in which the aryl portion can be substituted by, for example, halogen, alkyl and/or alkoxy. Suitable acyl groups include formyl, acetyl, propionyl, butanoyl and benzoyl.

Substituted radicals preferably have 1 to 3 substituents, especially 1 to 2 substituents.

In the compounds of Formula I,  $R^1$  is an alkyl group having preferably 1 to 4 carbon atoms which is optionally substituted by halogen, preferably fluorine or chlorine. In particular,  $R^1$  is preferably methyl or difluoromethyl.

$R^2$  is preferably cycloalkyl, particularly cyclopentyl.

$R^2$  is also preferably aryl or arylalkyl, particularly substituted or unsubstituted phenyl or phenylalkyl, such as phenyl, methylphenyl, methoxyphenyl, chlorophenyl, phenethyl, phenpropyl, phenbutyl, phenylethenyl, phenoxyethyl, phenoxypropyl, phenoxybutyl, chlorophenylethyl, methoxyphenylethyl, chlorophenylethenyl, chlorophenoxyethyl, chlorophenylpropyl, methoxyphenylpropyl, methoxyphenylbutyl, chlorophenylbutyl, nitrophenylbutyl, chlorophenylaminoethyl, and the like.

$R^2$  is also preferably a partially unsaturated carbocyclic groups, which is unsubstituted or substituted, particularly cyclohexenyl, cyclohexadienyl, indan-2-yl.

$R^2$  is also preferably an alkyl group having 1 to 8 carbon atoms, especially 1 to 4 carbon atoms, which is substituted or unsubstituted, e.g., methyl, difluoromethyl, trifluoromethyl, and methoxyethyl.

$R^2$  is also preferably a heterocyclic or heterocycle-alkyl group, particularly radicals in which the heterocyclic group has 5 to 6 ring atoms and 1 to 2 hetero-ring atoms selected from N, O and S, e.g., tetrahydrofuranyl, pyrrolidinyl, pyrrolyl, pyridylmethyl, pyridylethyl, pyridylpropyl, piperazinylmethyl, piperazinylethyl, methylpiperazinylethyl and the like.

Preferred  $R^2$  include cyclopentyl, tetrahydrofuranyl,  $\text{CHF}_2$ , methoxyethyl, cyclopropylmethyl, phenethyl, phenpropyl, phenylethenyl, phenoxyethyl, phenoxybutyl, phenylaminoethyl, indan-2-yl, pyridylethyl, and pyridylpropyl.

In the compounds of Formulas I-III,  $R^3$  is preferably aryl or heteroaryl, especially phenyl, naphthyl, biphenyl, furanyl, pyrazinyl, pyrimidinyl, pyridyl, quinolinyl, and isoquinolinyl, which in each case is unsubstituted or is substituted one or more times. Preferred substituents are OH, F, Cl,  $\text{CF}_3$ , alkyl (such as methyl or ethyl), alkoxy (such as methoxy and ethoxy), CN, vinyl,  $\text{CH}_2\text{OH}$ ,  $\text{CONHOH}$ ,  $\text{CONH}_2$ , methylenedioxy,  $\text{COOH}$ , and combinations thereof.  $R^3$  is preferably pyridyl or phenyl which in each case is substituted or unsubstituted. For example,  $R^3$  can be phenyl substituted by halogen,  $\text{COOH}$  and/or CN.

In addition, when  $R^3$  is aryl, especially, phenyl, preferred substituents include  $R^4$ -L-, e.g.,  $R^4$ -,  $R^4\text{-O-}$ ,  $R^4\text{-CO-}$ ,  $R^4\text{-NH-CO-}$ ,  $R^4\text{-SO}_2\text{-NH-}$ ,  $R^4\text{-SO}_2\text{-NHCO-}$ ,  $R^4\text{-SO}_2\text{-NH-alkylene-O-}$ ,  $\text{NH}_2\text{-alkyl-NH-CO-}$ ,  $R^4\text{-alkylene-NH-CO-}$ , and  $\text{alkyl-CO-NH-alkyl-}$ . Other preferred substituents include methyl, ethyl, Cl, F, CN,  $\text{OCH}_3$ ,  $\text{CF}_3$ , amino, nitro,  $\text{CH}_2\text{OH}$  and  $\text{COOH}$ .

When  $R^3$  is aryl substituted by  $R^4\text{-SO}_2\text{-NH-}$ , it is preferably a substituted phenyl group and  $R^4$  is preferably methyl, ethyl, propyl or phenyl.

When  $R^3$  is aryl substituted by  $R^4\text{-SO}_2\text{-NH-alkylene-O-}$ , it is preferably a substituted phenyl. In such cases,  $R^4$  is preferably methyl, ethyl, propyl or phenyl and alkylene is preferably  $\text{-CH}_2\text{-}$ ,  $\text{-CH}_2\text{CH}_2\text{-}$  or  $\text{-CH}_2\text{CH}_2\text{CH}_2\text{-}$ .

When  $R^3$  is aryl substituted by  $R^4$ -L-, it is preferably substituted phenyl. In such cases, preferred  $R^4$  groups include phenyl, tetrazolyl, oxazinyl, piperazinyl, methylpiperazinyl, pyridyl, methylpyridyl, pyrrolinyl, methylpyrrolinyl, piperadinyl, or methylpiperadinyl, and L is preferably a single bond, -O-, -CO-, -CH<sub>2</sub>-, -CH<sub>2</sub>CH<sub>2</sub>-, -CH<sub>2</sub>CH<sub>2</sub>CH<sub>2</sub>-, -CH<sub>2</sub>-O-, -CH<sub>2</sub>CH<sub>2</sub>-O-, -CH<sub>2</sub>CH<sub>2</sub>CH<sub>2</sub>-O-, -CH<sub>2</sub>-NH-CH<sub>2</sub>CH<sub>2</sub>-O-, -CO-NH-, -NH-CO-, or -CONHSO<sub>2</sub>-.

10  $R^6$  is preferably H or F, especially H.

In the compounds of Formula II,  $R^7$  can be an alkyl group having preferably 2 to 4 carbon atoms which is optionally substituted by halogen, preferably fluorine or chlorine.

15  $R^7$  can also preferably be cycloalkyl, particularly cyclopentyl or cyclohexyl.

$R^8$  is preferably H or alkyl having 1 to 4 carbon atoms, especially -C<sub>2</sub>H<sub>5</sub>.

20 In the compounds of Formula III,  $R^9$  is preferably alkoxy having 1 to 4 carbon atoms, which is branched or unbranched and which is unsubstituted or substituted one or more times by halogen, e.g., -OCH<sub>3</sub> or -OC<sub>2</sub>H<sub>5</sub>.

$R^{10}$  is preferably -CO-C<sub>1-4</sub>-alkyl, e.g., -COCH<sub>3</sub>.

25  $R^{11}$  is preferably -CH<sub>3</sub>.

$R^{12}$  and  $R^{13}$  are each independently preferably -CH<sub>3</sub> or -CH<sub>2</sub>CH<sub>3</sub>.

X and Y are each preferably O or S, especially O.

30 G is preferably -CH<sub>2</sub>CH<sub>2</sub>-.

In addition, preferred PDE4 inhibitors in accordance with the invention are compounds described by subformulas Ia-Ix, IIa-IIf, and IIIa-IIIe which correspond, respectively, to Formulas I-III but exhibit the following preferred groups:

5

Ia      $R^1$  is methyl or  $\text{CHF}_2$ ;  
          $R^2$  is alkyl, alkenyl, alkynyl, cycloalkyl, arylalkyl, heterocycle-alkyl, cycloalkylalkyl, aryl, or heterocyclic, in each case substituted or unsubstituted; and  
10      $R^3$  is aryl or heteroaryl, in each case substituted or unsubstituted.

15

Ib      $R^1$  is methyl or  $\text{CHF}_2$ ; and  
          $R^2$  is cyclopentyl,  $\text{CHF}_2$ , cyclopropylmethyl, pyridylethyl (particularly 2-pyridylethyl), or tetrahydrofuranyl (particularly (3R)-tetrahydrofuranyl).

20

Ic      $R^1$  is methyl or  $\text{CHF}_2$ ; and  
          $R^2$  is cyclopentyl,  $\text{CHF}_2$ , cyclopropylmethyl, pyridylethyl (particularly 2-pyridylethyl), or tetrahydrofuranyl (particularly (3R)-tetrahydrofuranyl); and  
          $R^3$  is aryl or heteroaryl, in each case substituted or unsubstituted.

25

Id      $R^1$  is methyl or  $\text{CHF}_2$ ;  
          $R^2$  is cyclopentyl; and  
          $R^3$  is substituted or unsubstituted aryl or heteroaryl.

30

Ie      $R^1$  is methyl;  
          $R^2$  is cyclopentyl; and  
          $R^3$  is phenyl which is substituted or unsubstituted.

- If  $R^1$  is methyl;  
 $R^2$  is cyclopentyl; and  
 $R^3$  is phenyl or phenyl substituted with 1 to 3 substituents.
- 5
- Ig  $R^1$  is methyl;  
 $R^2$  is cyclopentyl; and  
 $R^3$  is phenyl, naphthyl, biphenyl, pyridyl, pyrimidinyl, thiazolyl,  
pyrazinyl, quinolinyl, or isoquinolinyl, in each case substituted or  
10 unsubstituted.
- Ih  $R^1$  is methyl or  $\text{CHF}_2$ .
- Ii  $R^1$  is methyl or  $\text{CHF}_2$ , and  
15 B is N-O.
- Ij  $R^1$  is methyl or  $\text{CHF}_2$ , and  
 $R^2$  is cyclopentyl,  $\text{CHF}_2$ , cyclopropylmethyl, pyridylethyl (particularly 2-  
pyridylethyl), or tetrahydrofuranyl (particularly (3R)-tetrahydrofuranyl).
- 20
- Ik  $R^1$  is methyl or  $\text{CHF}_2$ ,  
B is N-O, and  
 $R^2$  is cyclopentyl,  $\text{CHF}_2$ , cyclopropylmethyl, pyridylethyl (particularly 2-  
pyridylethyl), or tetrahydrofuranyl (particularly (3R)-tetrahydrofuranyl).
- 25
- Il  $R^1$  is methyl or  $\text{CHF}_2$ , and  
 $R^3$  is 3-pyridyl or phenyl, which in each case is substituted or  
unsubstituted.
- 30
- Im  $R^1$  is methyl or  $\text{CHF}_2$ ,  
B is N-O, and

R<sup>3</sup> is 3-pyridyl or phenyl, which in each case is substituted or unsubstituted.

5 In R<sup>1</sup> is methyl or CHF<sub>2</sub>,  
R<sup>2</sup> is cyclopentyl, CHF<sub>2</sub>, cyclopropylmethyl, pyridylethyl (particularly 2-pyridylethyl), or tetrahydrofuranyl (particularly (3R)-tetrahydrofuranyl),  
and  
R<sup>3</sup> is 3-pyridyl or phenyl, which in each case is substituted or unsubstituted.

10 Io R<sup>1</sup> is methyl or CHF<sub>2</sub>,  
B is N-O,  
R<sup>2</sup> is cyclopentyl, CHF<sub>2</sub>, cyclopropylmethyl, pyridylethyl (particularly 2-pyridylethyl), or tetrahydrofuranyl (particularly (3R)-tetrahydrofuranyl),  
15 and  
R<sup>3</sup> is 3-pyridyl or phenyl, which in each case is substituted or unsubstituted.

20 Ip R<sup>1</sup> is methyl or CHF<sub>2</sub>, and  
R<sup>3</sup> is phenyl which is substituted in the 3- or 4- position.

Iq R<sup>1</sup> is methyl or CHF<sub>2</sub>,  
B is N-O, and  
R<sup>3</sup> is phenyl which is substituted in the 3- or 4- position.

25 Ir R<sup>1</sup> is methyl or CHF<sub>2</sub>,  
R<sup>2</sup> is cyclopentyl, CHF<sub>2</sub>, cyclopropylmethyl, pyridylethyl (particularly 2-pyridylethyl), or tetrahydrofuranyl (particularly (3R)-tetrahydrofuranyl),  
and  
30 R<sup>3</sup> is phenyl which is substituted in the 3- or 4- position.

- Is      $R^1$  is methyl or  $\text{CHF}_2$ ,  
        B is N-O,  
         $R^2$  is cyclopentyl,  $\text{CHF}_2$ , cyclopropylmethyl, pyridylethyl (particularly 2-pyridylethyl), or tetrahydrofuranyl (particularly (3R)-tetrahydrofuranyl),  
        and  
         $R^3$  is phenyl which is substituted in the 3- or 4- position.
- 5
- It      $R^1$  is methyl or  $\text{CHF}_2$ , and  
         $R^3$  is 3-pyridyl, 3-COOH-phenyl, 3-Cl-phenyl, 3-cyano-phenyl, 3-ethylsulfonamido-phenyl, 3-tetrazol-5-yl-phenyl, 3-hydroxymethyl-phenyl, 4-pyridyl, 4-COOH-phenyl, 4-cyano-phenyl, 4-ethylsulfonamido-phenyl, 4-tetrazol-5-yl-phenyl, or 4-hydroxymethyl-phenyl.
- 10
- Iu      $R^1$  is methyl or  $\text{CHF}_2$ ,  
        B is N-O, and  
         $R^3$  is 3-pyridyl, 3-COOH-phenyl, 3-Cl-phenyl, 3-cyano-phenyl, 3-ethylsulfonamido-phenyl, 3-tetrazol-5-yl-phenyl, 3-hydroxymethyl-phenyl, 4-pyridyl, 4-COOH-phenyl, 4-cyano-phenyl, 4-ethylsulfonamido-phenyl, 4-tetrazol-5-yl-phenyl, or 4-hydroxymethyl-phenyl.
- 15
- 20
- Iv      $R^1$  is methyl or  $\text{CHF}_2$ ,  
         $R^2$  is cyclopentyl,  $\text{CHF}_2$ , cyclopropylmethyl, pyridylethyl (particularly 2-pyridylethyl), or tetrahydrofuranyl (particularly (3R)-tetrahydrofuranyl),  
        and  
         $R^3$  is 3-pyridyl, 3-COOH-phenyl, 3-Cl-phenyl, 3-cyano-phenyl, 3-ethylsulfonamido-phenyl, 3-tetrazol-5-yl-phenyl, 3-hydroxymethyl-phenyl, 4-pyridyl, 4-COOH-phenyl, 4-cyano-phenyl, 4-ethylsulfonamido-phenyl, 4-tetrazol-5-yl-phenyl, or 4-hydroxymethyl-phenyl.
- 25
- 30
- Iw      $R^1$  is methyl or  $\text{CHF}_2$ ,  
        B is N-O,

- $R^2$  is cyclopentyl,  $\text{CHF}_2$ , cyclopropylmethyl, pyridylethyl (particularly 2-pyridylethyl), or tetrahydrofuranyl (particularly (3R)-tetrahydrofuranyl), and
- $R^3$  is 3-pyridyl, 3-COOH-phenyl, 3-Cl-phenyl, 3-cyano-phenyl, 3-ethylsulfonamido-phenyl, 3-tetrazol-5-yl-phenyl, 3-hydroxymethyl-phenyl, 3-nitro-phenyl, 4-pyridyl, 4-COOH-phenyl, 4-cyano-phenyl, 4-ethylsulfonamido-phenyl, 4-tetrazol-5-yl-phenyl, or 4-hydroxymethyl-phenyl.
- 5
- 10      Ix      Any of subformulas Ia - Iw wherein  $R^6$  is H.
- IIa       $R^3$  is H or is aryl or heteroaryl, in each case substituted or unsubstituted.
- 15      IIb       $R^7$  is cycloalkyl; and  
                  $R^8$  is H or  $\text{C}_2\text{H}_5$ .
- IIc       $R^7$  is cycloalkyl;  
                  $R^8$  is H or  $\text{C}_2\text{H}_5$ ; and  
20               $R^3$  is H or is aryl or heteroaryl, in each case substituted or unsubstituted.
- IId       $R^7$  is cyclopentyl;  
                  $R^8$  is H or  $\text{C}_2\text{H}_5$ ; and  
25               $R^3$  is H or is aryl or heteroaryl, in each case substituted or unsubstituted.
- IIe       $R^7$  is cyclopentyl;  
                  $R^8$  is H or  $\text{C}_2\text{H}_5$ ; and  
30               $R^3$  is phenyl which is substituted or unsubstituted.

IIIf Any of subformulas IIa - IIe wherein  $R^6$  is H.

IIIa  $R^3$  is H or is aryl or heteroaryl, in each case substituted or unsubstituted.

5

IIIb  $R^9$  is alkoxy having 1 to 4 carbon atoms;  
 $R^{10}$  is  $\text{COCH}_3$  or

$R^{11}$  is  $-\text{CH}_3$ ;

10

$X$  and  $Y$  are both O or S; and

$G$  is  $-\text{CH}_2\text{CH}_2-$ .

IIIc  $R^3$  is H or is aryl or heteroaryl, in each case substituted or unsubstituted;

15

$R^9$  is alkoxy having 1 to 4 carbon atoms;

$R^{10}$  is  $\text{COCH}_3$  or

$R^{11}$  is  $-\text{CH}_3$ ;

20

$X$  and  $Y$  are both O or S; and

$G$  is  $-\text{CH}_2\text{CH}_2-$ .

IIId  $R^3$  is phenyl which is substituted or unsubstituted;

$R^9$  is alkoxy having 1 to 4 carbon atoms;

$R^{10}$  is  $\text{COCH}_3$  or

$R^{11}$  is  $-CH_3$ ;

X and Y are both O or S; and

G is  $-CH_2CH_2-$ .

5

IIIe Any of subformulas IIIa - IIId wherein  $R^6$  is H.

According to a further aspect of the invention, the compounds of formulas I-III are selected from the following:

- 10 a) 3'-Chloro-3-cyclopentyloxy-4-methoxy-*N*-(1-oxy-3-pyridylmethyl)diphenylamine (Which can also be called 3-Chloro-*N*-(3-cyclopentyloxy-4-methoxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)aniline)
- b) 3'-Chloro-4-methoxy-*N*-(1-oxy-3-pyridylmethyl)-3-(3-tetrahydrofuryloxy)diphenylamine (Which can also be called 3-Chloro-*N*-(4-methoxy-3-tetrahydrofuryloxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)aniline)
- 15 c) 3'-Cyano-4-methoxy-*N*-(1-oxy-3-pyridylmethyl)-3-((3*R*)-tetrahydrofuryloxy)diphenylamine (Which can also be called 3-Cyano-*N*-[4-methoxy-3-((3*R*)-3-tetrahydrofuranyl)oxyphenyl]-*N*-(1-oxy-3-pyridylmethyl)aniline)
- 20 d) 4-Difluoromethoxy-*N*-(1-oxy-3-pyridylmethyl)-3-(3-tetrahydrofuryloxy)diphenylamine (Which can also be called *N*-(4-Difluoromethoxy-3-tetrahydrofuryloxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)aniline)
- e) 3,4-Bis(difluoromethoxy)-*N*-(1-oxy-3-pyridylmethyl)diphenylamine (Which can also be called *N*-[3,4-Bis(difluoromethoxy)phenyl]-*N*-(1-oxy-3-pyridylmethyl)aniline)
- 25 f) 4-Difluoromethoxy-*N*-(1-oxy-3-pyridylmethyl)-3-((3*R*)-tetrahydrofuryloxy)diphenylamine (Which can also be called *N*-[4-Difluoromethoxy-3-((3*R*)-3-tetrahydrofuranyl)oxyphenyl]-*N*-(1-oxy-3-pyridylmethyl)aniline)

- g) 3'-Cyano-4-difluoromethoxy-*N*-(1-oxy-3-pyridylmethyl)-3-((3*R*)-tetrahydrofuryloxy)diphenylamine (Which can also be called 3-Cyano-*N*-[4-difluoromethoxy-3-((3*R*)-3-tetrahydrofuranyl)oxyphenyl]-*N*-(1-oxy-3-pyridylmethyl)aniline)
- 5 h) 3'-Chloro-4-difluoromethoxy-*N*-(1-oxy-3-pyridylmethyl)-3-((3*R*)-tetrahydrofuryloxy)diphenylamine (Which can also be called 3-Chloro-*N*-[4-difluoromethoxy-3-((3*R*)-3-tetrahydrofuranyl)oxyphenyl]-*N*-(1-oxy-3-pyridylmethyl)aniline)
- 10 i) 4'-*tert*-Butyldimethylsilyloxy-3-cyclopentyloxy-4-methoxy-*N*-(1-oxy-3-pyridylmethyl)diphenylamine (Which can also be called 4'-*tert*-Butyldimethylsilyloxy-*N*-(3-cyclopentyloxy-4-methoxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)aniline)
- 15 j) *N*-(3-Cyclopentyloxy-4-methoxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)-3-aminobenzoic acid (Which can also be called 3-Amino-*N*-(3-cyclopentyloxy-4-methoxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)benzoic acid)
- k) *N*-(3-Cyclopentyloxy-4-methoxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)-4-aminobenzoic acid (Which can also be called 4-Amino-*N*-(3-cyclopentyloxy-4-methoxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)benzoic acid)
- 20 l) *N*-(3-Cyclopentyloxy-4-difluoromethoxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)-3-aminobenzoic acid (Which can also be called 3-Amino-*N*-(3-cyclopentyloxy-4-difluoromethoxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)benzoic acid)
- m) *N*-[4-Methoxy-3-(3-tetrahydrofuryloxy)phenyl]-*N*-(1-oxy-3-pyridylmethyl)-3-aminobenzoic acid (Which can also be called 3-Amino-*N*-[4-methoxy-3-(3-tetrahydrofuryloxy)phenyl]-*N*-(1-oxy-3-pyridylmethyl)benzoic acid)

 pharmaceutically acceptable salts thereof,  
 wherein optically active compounds can be in the form of their separate enantiomers  
 15 or mixtures thereof, including racemic mixtures.

Preferred aspects include pharmaceutical compositions comprising a compound of this invention and a pharmaceutically acceptable carrier and, optionally, another active agent as discussed below; a method of inhibiting a PDE4 enzyme, especially an  
 20 isoenzyme, e.g., as determined by a conventional assay or one described herein, either *in vitro* or *in vivo* (in an animal, e.g., in an animal model, or in a mammal or in a human); a method of treating neurological syndrome, e.g., loss of memory, especially long-term memory, cognitive impairment or decline, memory impairment, etc. a method of treating a disease state modulated by PDE4 activity, in a mammal, e.g., a human, e.g., those  
 25 mentioned herein.

The compounds of the present invention may be prepared conventionally. Some of the processes which can be used are described below. All starting materials are known or can be conventionally prepared from known starting materials.

5

The reaction scheme shown above is for illustrative purposes only and should not be viewed as limiting the scope of the synthetic methods available for the production of the compounds described within this application. Pyridine N-oxides can be produced by methods common within the art, such as by the reaction of the corresponding pyridine with peroxides, e.g., hydrogen peroxide, mCPBA or peracetic acid, in halogenated solvents, such as chloroform or dichloromethane, or in polar protic solvents, such as acetic acid. Thus, for example, the reaction of 3-chloromethylpyridine with peracetic acid in acetic acid/chloroform yields the desired 3-chloromethylpyridine N-oxide as a white crystalline solid.

15

Subsequently, the anion of the diphenylamine or substituted aniline is prepared by reaction with a strong base, such as sodium hydride, LDA, or potassium hexamethyldisilylazide, in polar aprotic solvents such as DMF or THF. Treatment of the anion of the diphenylamine or substituted aniline with a halomethylpyridine N-oxide provides the desired compounds.

20

Many of these synthetic procedures are described more fully in the examples below.

One of ordinary skill in the art will recognize that some of the compounds of Formulae I-III can exist in different geometrical isomeric forms. In addition, some of the compounds of the present invention possess one or more asymmetric carbon atoms and are thus capable of existing in the form of optical isomers, as well as in the form of racemic or nonracemic mixtures thereof, and in the form of diastereomers and diastereomeric mixtures *inter alia*. All of these compounds, including *cis* isomers, *trans* isomers, diastereomeric mixtures, racemates, nonracemic mixtures of enantiomers, and substantially pure and pure enantiomers, are within the scope of the present invention. Substantially pure enantiomers contain no more than 5% w/w of the corresponding opposite enantiomer, preferably no more than 2%, most preferably no more than 1%.

The optical isomers can be obtained by resolution of the racemic mixtures according to conventional processes, for example, by the formation of diastereoisomeric salts using an optically active acid or base or formation of covalent diastereomers. Examples of appropriate acids are tartaric, diacetyltartaric, dibenzoyltartaric, ditoluoyltartaric and camphorsulfonic acid. Mixtures of diastereoisomers can be separated into their individual diastereomers on the basis of their physical and/or chemical differences by methods known to those skilled in the art, for example, by chromatography or fractional crystallization. The optically active bases or acids are then liberated from the separated diastereomeric salts. A different process for separation of optical isomers involves the use of chiral chromatography (e.g., chiral HPLC columns), with or without conventional derivation, optimally chosen to maximize the separation of the enantiomers. Suitable chiral HPLC columns are manufactured by Diacel, e.g., Chiracel OD and Chiracel OJ among many others, all routinely selectable. Enzymatic separations, with or without derivitization, are also useful. The optically active compounds of Formulae I-III can likewise be obtained by chiral syntheses utilizing optically active starting materials.

In addition, one of ordinary skill in the art will recognize that the compounds can be used in different enriched isotopic forms, e.g., enriched in the content of  $^2\text{H}$ ,  $^3\text{H}$ ,  $^{11}\text{C}$ ,  $^{13}\text{C}$  and/or  $^{14}\text{C}$ . In one particular embodiment, the compounds are deuterated. Such

deuterated forms can be made the procedure described in U.S. Patent Nos. 5,846,514 and 6,334,997. As described in U.S. Patent Nos. 5,846,514 and 6,334,997, deuteration can improve the efficacy and increase the duration of action of drugs.

5           Deuterium substituted compounds can be synthesized using various methods such as described in: Dean, Dennis C.; Editor. Recent Advances in the Synthesis and Applications of Radiolabeled Compounds for Drug Discovery and Development. [In: Curr., Pharm. Des., 2000; 6(10)] (2000), 110 pp. CAN 133:68895 AN 2000:473538 CAPLUS; Kabalka, George W.; Varma, Rajender S. The synthesis of radiolabeled

Synthesis of radiolabeled compounds, J. Radioanal. Chem. (1981), 64(1-2), 9-32. CODEN: JRACBN ISSN:0022-4081, CAN 95:76229 AN 1981:476229 CAPLUS.

15

          The present invention also relates to useful forms of the compounds as disclosed herein, such as pharmaceutically acceptable salts and prodrugs of all the compounds of the present invention. Pharmaceutically acceptable salts include those obtained by reacting the main compound, functioning as a base, with an inorganic or organic acid to  
20 form a salt, for example, salts of hydrochloric acid, sulfuric acid, phosphoric acid, methane sulfonic acid, camphor sulfonic acid, oxalic acid, maleic acid, succinic acid and citric acid. Pharmaceutically acceptable salts also include those in which the main compound functions as an acid and is reacted with an appropriate base to form, e.g., sodium, potassium, calcium, magnesium, ammonium, and choline salts. Those skilled  
25 in the art will further recognize that acid addition salts of the claimed compounds may be prepared by reaction of the compounds with the appropriate inorganic or organic acid via any of a number of known methods. Alternatively, alkali and alkaline earth metal salts are prepared by reacting the compounds of the invention with the appropriate base via a variety of known methods.

30

The following are further examples of acid salts that can be obtained by reaction with inorganic or organic acids: acetates, adipates, alginates, citrates, aspartates, benzoates, benzenesulfonates, bisulfates, butyrates, camphorates, digluconates, cyclopentanepropionates, dodecylsulfates, ethanesulfonates, glucoheptanoates, glycerophosphates, hemisulfates, heptanoates, hexanoates, fumarates, hydrobromides, hydroiodides, 2-hydroxy-ethanesulfonates, lactates, maleates, methanesulfonates, nicotines, 2-naphthalenesulfonates, oxalates, palmoates, pectinates, persulfates, 3-phenylpropionates, picrates, pivalates, propionates, succinates, tartrates, thiocyanates, tosylates, mesylates and undecanoates.

10

Preferably, the salts formed are pharmaceutically acceptable for administration to mammals. However, pharmaceutically unacceptable salts of the compounds are suitable as intermediates, for example, for isolating the compound as a salt and then converting the salt back to the free base compound by treatment with an alkaline reagent. The free base can then, if desired, be converted to a pharmaceutically acceptable acid addition salt.

15

The compounds of the invention can be administered alone or as an active ingredient of a formulation. Thus, the present invention also includes pharmaceutical compositions of compounds of Formulas I-III containing, for example, one or more pharmaceutically acceptable carriers.

20

Numerous standard references are available that describe procedures for preparing various formulations suitable for administering the compounds according to the invention. Examples of potential formulations and preparations are contained, for example, in the Handbook of Pharmaceutical Excipients, American Pharmaceutical Association (current edition); Pharmaceutical Dosage Forms: Tablets (Lieberman, Lachman and Schwartz, editors) current edition, published by Marcel Dekker, Inc., as well as Remington's Pharmaceutical Sciences (Arthur Osol, editor), 1553-1593 (current edition).

25

30

In view of their high degree of PDE4 inhibition, the compounds of the present invention can be administered to anyone requiring or desiring PDE4 inhibition, and/or enhancement of cognition. Administration may be accomplished according to patient needs, for example, orally, nasally, parenterally (subcutaneously, intravenously, 5 intramuscularly, intrasternally and by infusion), by inhalation, rectally, vaginally, topically, locally, transdermally, and by ocular administration.

Various solid oral dosage forms can be used for administering compounds of the invention including such solid forms as tablets, gelcaps, capsules, caplets, granules, 10 lozenges and bulk powders. The compounds of the present invention can be administered alone or combined with various pharmaceutically acceptable carriers, diluents (such as sucrose, mannitol, lactose, starches) and excipients known in the art, including but not limited to suspending agents, solubilizers, buffering agents, binders, disintegrants, preservatives, colorants, flavorants, lubricants and the like. Time release capsules, tablets 15 and gels are also advantageous in administering the compounds of the present invention.

Various liquid oral dosage forms can also be used for administering compounds of the invention, including aqueous and non-aqueous solutions, emulsions, suspensions, syrups, and elixirs. Such dosage forms can also contain suitable inert diluents known in 20 the art such as water and suitable excipients known in the art such as preservatives, wetting agents, sweeteners, flavorants, as well as agents for emulsifying and/or suspending the compounds of the invention. The compounds of the present invention may be injected, for example, intravenously, in the form of an isotonic sterile solution. Other preparations are also possible.

25

Suppositories for rectal administration of the compounds of the present invention can be prepared by mixing the compound with a suitable excipient such as cocoa butter, salicylates and polyethylene glycols. Formulations for vaginal administration can be in the form of a pessary, tampon, cream, gel, paste, foam, or spray formula containing, in 30 addition to the active ingredient, such suitable carriers as are known in the art.

For topical administration the pharmaceutical composition can be in the form of creams, ointments, liniments, lotions, emulsions, suspensions, gels, solutions, pastes, powders, sprays, and drops suitable for administration to the skin, eye, ear or nose. Topical administration may also involve transdermal administration via means such as transdermal patches.

Aerosol formulations suitable for administering via inhalation also can be made. For example, for treatment of disorders of the respiratory tract, the compounds according to the invention can be administered by inhalation in the form of a powder (e.g., micronized) or in the form of atomized solutions or suspensions. The aerosol formulation can be placed into a pressurized acceptable propellant.

The compounds can be administered as the sole active agent or in combination with other pharmaceutical agents such as other agents used in the treatment of cognitive impairment and/or in the treatment of psychosis, e.g., other PDE4 inhibitors, calcium channel blockers, cholinergic drugs, adenosine receptor modulators, AMPA/kainate NMDA-R modulators, mGluR modulators, and cholinesterase inhibitors (e.g., donepezil, rivastigmine, and galanthamine). In such combinations, each active ingredient can be administered either in accordance with their usual dosage range or a dose below its usual dosage range.

The present invention further includes methods of treatment that involve inhibition of PDE4 enzymes. Thus, the present invention includes methods of selective inhibition of PDE4 enzymes in animals, e.g., mammals, especially humans, wherein such inhibition has a therapeutic effect, such as where such inhibition may relieve conditions involving neurological syndromes, such as the loss of memory, especially long-term memory. Such methods comprise administering to an animal in need thereof, especially a mammal, most especially a human, an inhibitory amount of a compound, alone or as part of a formulation, as disclosed herein.

The condition of memory impairment is manifested by impairment of the ability to learn new information and/or the inability to recall previously learned information. Memory impairment is a primary symptom of dementia and can also be a symptom associated with such diseases as Alzheimer's disease, schizophrenia, Parkinson's disease, 5 Huntington's disease, Pick's disease, Creutzfeld-Jakob disease, HIV, cardiovascular disease, and head trauma as well as age-related cognitive decline.

Dementias are diseases that include memory loss and additional intellectual impairment separate from memory. The present invention includes methods for treating 10 patients suffering from memory impairment in all forms of dementia. Dementias are classified according to their cause and include: neurodegenerative dementias (e.g., Alzheimer's, Parkinson's disease, Huntington's disease, Pick's disease), vascular (e.g., infarcts, hemorrhage, cardiac disorders), mixed vascular and Alzheimer's, bacterial meningitis, Creutzfeld-Jacob Disease, multiple sclerosis, traumatic (e.g., subdural 15 hematoma or traumatic brain injury), infectious (e.g., HIV), genetic (down syndrome), toxic (e.g., heavy metals, alcohol, some medications), metabolic (e.g., vitamin B12 or folate deficiency), CNS hypoxia, Cushing's disease, psychiatric (e.g., depression and schizophrenia), and hydrocephalus.

20 The present invention includes methods for dealing with memory loss separate from dementia, including mild cognitive impairment (MCI) and age-related cognitive decline. The present invention includes methods of treatment for memory impairment as a result of disease. In another application, the invention includes methods for dealing with memory loss resulting from the use of general anesthetics, chemotherapy, radiation 25 treatment, post-surgical trauma, and therapeutic intervention.

The compounds may be used to treat psychiatric conditions including schizophrenia, bipolar or manic depression, major depression, and drug addiction and morphine dependence. These compounds may enhance wakefulness. PDE4 inhibitors 30 can be used to raise cAMP levels and prevent neurons from undergoing apoptosis. PDE4 inhibitors are also known to be anti-inflammatory. The combination of anti-apoptotic

and anti-inflammatory properties make these compounds useful to treat neurodegeneration resulting from any disease or injury, including stroke, spinal cord injury, Alzheimer's disease, multiple sclerosis, amyloidosis (ALS), and multiple systems atrophy (MSA).

5

Thus, in accordance with a preferred embodiment, the present invention includes methods of treating patients suffering from memory impairment due to, for example, Alzheimer's disease, multiple sclerosis, amyloidosis (ALS), multiple systems atrophy (MSA), schizophrenia, Parkinson's disease, Huntington's disease, Pick's disease, 10 Creutzfeld-Jakob disease, Rubenstein-Taybi syndrome (RSTS), depression, aging, head trauma, stroke, spinal cord injury, CNS hypoxia, cerebral senility, diabetes associated cognitive impairment, memory deficits from early exposure of anesthetic agents, multi-infarct dementia and other neurological conditions including acute neuronal diseases, as well as HIV and cardiovascular diseases, comprising administering an 15 effective amount of a compound according to Formulas I-III or pharmaceutically acceptable salts thereof.

The compounds of the present invention can also be used in a method of treating patients suffering from disease states characterized by decreased NMDA function, such 20 as schizophrenia. The compounds can also be used to treat psychosis characterized by elevated levels of PDE 4, for example, various forms of depression, such as manic depression, major depression, and depression associated with psychiatric and neurological disorders.

The compounds of the present invention can also be used in methods of treating 25 patients suffering from obesity and in treatment methods for neuronal regeneration or neurogenesis.

As mentioned, the compounds of the invention also exhibit anti-inflammatory activity. As a result, the inventive compounds are useful in the treatment of a variety of allergic and inflammatory diseases, particularly disease states characterized by decreased

cyclic AMP levels and/or elevated phosphodiesterase 4 levels. Thus, in accordance with a further embodiment of the invention, there is provided a method of treating allergic and inflammatory disease states, comprising administering an effective amount of a compound according to Formulae I-III or a pharmaceutically acceptable salt thereof.

5 Such disease states include: asthma, chronic bronchitis, chronic obstructive pulmonary disease (COPD), atopic dermatitis, urticaria, allergic rhinitis, allergic conjunctivitis, vernal conjunctivitis, eosinophilic granuloma, psoriasis, inflammatory arthritis, rheumatoid arthritis, septic shock, ulcerative colitis, Crohn's disease, reperfusion injury of the myocardium and brain, chronic glomerulonephritis, endotoxic shock, adult  
10 respiratory distress syndrome, cystic fibrosis, arterial restenosis, arteriosclerosis, keratosis, rheumatoid spondylitis, osteoarthritis, pyresis, diabetes mellitus, pneumoconiosis, chronic obstructive airways disease, chronic obstructive pulmonary disease, toxic and allergic contact eczema, atopic eczema, seborrheic eczema, lichen simplex, sunburn, pruritis in the anogenital area, alopecia areata, hypertrophic scars,  
15 discoid lupus erythematosus, systemic lupus erythematosus, follicular and wide-area pyodermias, endogenous and exogenous acne, acne rosacea, Beghet's disease, anaphylactoid purpura nephritis, inflammatory bowel disease, leukemia, multiple sclerosis, gastrointestinal diseases, autoimmune diseases and the like.

20 PDE4 inhibitors for treating asthma, chronic bronchitis, psoriasis, allergic rhinitis, and other inflammatory diseases, and for inhibiting tumor necrosis factor are known within the art. See, e.g., WO 98/58901, JP11-189577, JP 10-072415, WO 93/25517, WO 94/14742, US 5,814,651, and US 5,935,978. These references also describe assays for determining PDE4 inhibition activity, and methods for synthesizing such compounds.  
25 The entire disclosures of these documents are hereby incorporated by reference.

PDE4 inhibitors may be used to prevent or ameliorate osteoporosis, as an antibiotic, for treatment of cardiovascular disease by mobilizing cholesterol from atherosclerotic lesions, to treat rheumatoid arthritis (RA), for long-term inhibition of  
30 mesenchymal-cell proliferation after transplantation, for treatment of urinary obstruction

secondary to benign prostatic hyperplasia, for suppression of chemotaxis and reduction of invasion of colon cancer cells, for treatment of B cell chronic lymphocytic leukemia (B-CLL), for inhibition of uterine contractions, to attenuate pulmonary vascular ischemia-reperfusion injury (IRI) , for corneal hydration , for inhibition of IL-2R expression and  
5 thereby abolishing HIV-1 DNA nuclear import into memory T cells, for augmentation of glucose-induced insulin secretion, in both the prevention and treatment of colitis, and to inhibit mast cell degranulation.

The invention is also suitable for use in the treatment of a class of disorders  
10 known as polyglutamine-repeat diseases. These diseases share a common pathogenic mutation. The expansion of a CAG repeat, which encodes the amino acid glutamine, within the genome leads to production of a mutant protein having an expanded polyglutamine region. For example, Huntington's disease has been linked to a mutation of the protein huntingtin. In individuals who do not have Huntington's disease,  
15 huntingtin has a polyglutamine region containing about 8 to 31 glutamine residues. For individuals who have Huntington's disease, huntingtin has a polyglutamine region with over 37 glutamine residues. Aside from Huntington's disease (HD), other known polyglutamine-repeat diseases and the associated proteins are: dentatorubral-pallidoluysian atrophy, DRPLA (atrophin-1); spinocerebellar ataxia type-1 (ataxin-1);  
20 spinocerebellar ataxia type-2 (ataxin-2); spinocerebellar ataxia type-3 also called Machado-Joseph disease, MJD (ataxin-3); spinocerebellar ataxia type-6 (alpha 1a-voltage dependent calcium channel); spinocerebellar ataxia type-7 (ataxin-7); and spinal and bulbar muscular atrophy, SBMA, also know as Kennedy disease (androgen receptor).

25 Thus, in accordance with a further aspect of the invention, there is provided a method of treating a polyglutamine-repeat disease or CAG repeat expansion disease comprising administering to a patient, especially a human, a therapeutically effective amount of a compound according to Formulas I-III. In accordance with a further embodiment, there is provided a method of treating Huntington's disease (HD),  
30 dentatorubral-pallidoluysian atrophy (DRPLA), spinocerebellar ataxia type-1, spinocerebellar ataxia type-2, spinocerebellar ataxia type-3 (Machado-Joseph disease),

spinocerebellar ataxia type-6, spinocerebellar ataxia type-7, or spinal and bulbar muscular atrophy, comprising administering to a patient, especially a human, a therapeutically effective amount of a compound according to Formulas I-III.

5           The compounds of the present invention can be administered as the sole active agent or in combination with other pharmaceutical agents such as other agents used in the treatment of cognitive impairment and/or in the treatment of psychosis, e.g., other PDE4 inhibitors, calcium channel blockers, chloinerbic drugs, adenosine receptor modulators, amphakines NMDA-R modulators, mGluR modulators, and cholinesterase inhibitors  
10 (e.g., donepezil, rivastigmine, and glanthanamine). In such combinations, each active ingredient can be administered either in accordance with their usual dosage range or a dose below their usual dosage range.

          The dosages of the compounds of the present invention depend upon a variety of  
15 factors including the particular syndrome to be treated, the severity of the symptoms, the route of administration, the frequency of the dosage interval, the particular compound utilized, the efficacy, toxicology profile, pharmacokinetic profile of the compound, and the presence of any deleterious side-effects, among other considerations.

20           The compounds of the invention are typically administered at dosage levels and in a mammal customary for PDE4 inhibitors such as those known compounds mentioned above. For example, the compounds can be administered, in single or multiple doses, by oral administration at a dosage level of, for example, 0.01-100 mg/kg/day, preferably 0.1-70 mg/kg/day, especially 0.5-10 mg/kg/day. Unit dosage forms can contain, for example,  
25 0.1-50 mg of active compound. For intravenous administration, the compounds can be administered, in single or multiple dosages, at a dosage level of, for example, 0.001-50 mg/kg/day, preferably 0.001-10 mg/kg/day, especially 0.01-1 mg/kg/day. Unit dosage forms can contain, for example, 0.1-10 mg of active compound.

30           In carrying out the procedures of the present invention it is of course to be understood that reference to particular buffers, media, reagents, cells, culture conditions

and the like are not intended to be limiting, but are to be read so as to include all related materials that one of ordinary skill in the art would recognize as being of interest or value in the particular context in which that discussion is presented. For example, it is often possible to substitute one buffer system or culture medium for another and still achieve  
5 similar, if not identical, results. Those of skill in the art will have sufficient knowledge of such systems and methodologies so as to be able, without undue experimentation, to make such substitutions as will optimally serve their purposes in using the methods and procedures disclosed herein.

10 The present invention will now be further described by way of the following non-limiting examples. In applying the disclosure of these examples, it should be kept clearly in mind that other and different embodiments of the methods disclosed according to the present invention will no doubt suggest themselves to those of skill in the relevant art.

15 In the foregoing and in the following examples, all temperatures are set forth uncorrected in degrees Celsius; and, unless otherwise indicated, all parts and percentages are by weight.

The entire disclosures of all applications, patents and publications, cited above  
20 and below, are hereby incorporated by reference.

#### EXAMPLE 1

**3-Chloromethylpyridine N-Oxide** Picolyl chloride hydrochloride (8.0 g, 49 mmol) is dissolved in ice cold, saturated, aqueous sodium bicarbonate (100 mL) and the  
25 mixture is extracted with 2 X 100 mL chloroform. The chloroform extracts are dried (MgSO<sub>4</sub>) and filtered. 32% Peracetic acid in acetic acid (50 mL) is added to the filtrate and the mixture is vigorously stirred for 18 h. The mixture is washed twice with cold, sat., aq. NaHCO<sub>3</sub>, dried (MgSO<sub>4</sub>), and concentrated *in vacuo*. The solid obtained is

trituated with hexanes and dried *in vacuo* to give 3-chloromethylpyridine N-oxide (2.0 g, 29% yield) as a white crystalline solid.

1H NMR (300 MHz, CDCl<sub>3</sub>) δ 8.16 (s, 1H), 8.03 (m, 1H), 7.13-7.23 (m, 2H), 4.04 (s, 2H).

The compounds 2-chloromethylpyridine N-oxide and 4-chloromethylpyridine N-oxide can be prepared in a similar manner.

10

## EXAMPLE 2

### 4-Amino-N-(3-cyclopentyloxy-4-methoxyphenyl)-N-(1-oxy-3-pyridylmethyl)pyridine

4-Amino-N-(3-cyclopentyloxy-4-methoxyphenyl)pyridine (0.28 g, 1.0 mmol) was dissolved in DMF (1 mL) and added drop-wise to a stirred suspension of NaH (200 mg of a 60% mineral oil dispersion, 5.0 mmol) in DMF (4 mL) at room temperature. After addition was complete, the mixture was stirred for 0.5 h at room temperature and 3-chloromethylpyridine N-oxide (300 mg, 2.0 mmol) was added in one portion. The mixture was stirred for 4 h, then carefully quenched with water and partitioned between EtOAc (50 mL) and water (50 mL). The EtOAc layer was washed with water (25 mL) and brine (25 mL), dried (MgSO<sub>4</sub>), and concentrated *in vacuo*. The residue was purified by flash column chromatography (silica gel) eluting with 30% MeOH in EtOAc to give 4-amino-N-(3-cyclopentyloxy-4-methoxyphenyl)-N-(1-oxypyridin-3-ylmethyl)pyridine (64 mg, 16% yield).

1H NMR (300 MHz, CDCl<sub>3</sub>) δ 8.16 (m, 3H), 8.08 (d, 1H, J = 6.0 Hz), 7.20-7.60 (m, 2H), 6.85 (d, 2H, J = 8.5), 6.72 (dd, 1H, J = 8.4, 2.4), 6.66 (s, J = 2.4 Hz, 2H), 6.40-6.50 (m, 2H), 4.82 (s, 2H), 4.65 (m, 1H), 3.82 (s, 3H), 1.60-1.90 (m, 6H), 1.50-1.60 (m, 2H).

The following compounds were prepared in a similar fashion as described above:

- a) *tert*-Butyl 3-Amino-N-(3-cyclopentyloxy-4-methoxyphenyl)-N-(1-oxy-3-pyridylmethyl)benzoate
- b) *tert*-Butyl 4-Amino-N-(3-cyclopentyloxy-4-methoxyphenyl)-N-(1-oxy-3-pyridylmethyl)benzoate

- c) *N*-[Bis-3,4-(difluoromethoxy)phenyl]-*N*-(1-oxy-3-pyridylmethyl)-4-[2-(2-tetrahydropyranyl)-2H-tetrazol-5-yl]aniline
- d) 3-Chloro-*N*-[4-methoxy-3-((3*R*)-3-tetrahydrofuran)oxyphenyl]-*N*-(1-oxy-3-pyridylmethyl)aniline MS (ES): *m/z* 427 [*M* + 1]
- 5 e) *tert*-Butyl 3-Amino-*N*-[bis-3,4-(difluoromethoxy)phenyl]-*N*-(1-oxy-3-pyridylmethyl)benzoate

### EXAMPLE 3

#### 10 4-Amino-*N*-(3-cyclopentyloxy-4-methoxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)benzoic acid

A solution consisting of 1.75 g (3.44 mmol) of *tert*-butyl 4-Amino-*N*-(3-cyclopentyloxy-4-methoxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)benzoate, 33.5 mL of dichloromethane and 8.4 mL of trifluoroacetic acid was stirred at room temperature for 5 hours. The solution was washed with 50 mL of H<sub>2</sub>O. Then 50 mL of H<sub>2</sub>O was added and the pH adjusted to 6 by the addition of 10% aqueous NaOH. The combined aqueous layers were extracted with 2 x 50 mL of dichloromethane. The combined dichloromethane extracts were evaporated and the remaining material was purified by flash chromatography over SiO<sub>2</sub> using 10% MeOH in CH<sub>2</sub>Cl<sub>2</sub> as eluant. The material was triturated with CH<sub>3</sub>CN to yield 1.09 g (73% yield) of the title compound as a tan powder. <sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 8.57 (s, 1H), 8.23 (d, J=6.3Hz, 1H), 7.72 (d, J=9.0, 2H), 7.4-7.2 (m, 2H), 6.9-6.7 (m, 3H), 6.58 (d, J=9.0, 2H), 4.94 (s, 2H), 4.71 (m, 1H), 3.83 (s, 3H), 2.0-1.7 (m, 6H), 1.7-1.5 (m, 2H). MS (ES): *m/z* 435 [*M* + 1]

25 The following compounds were prepared in a similar manner as described above:

3-Amino-*N*-(3-cyclopentyloxy-4-methoxyphenyl)-*N*-(1-oxy-3-pyridylmethyl)benzoic acid MS (ES): *m/z* 435 [*M* + 1]

3-Amino-*N*-[bis-3,4-(difluoromethoxy)phenyl]-*N*-(1-oxy-3-pyridylmethyl)benzoic acid MS (ES): *m/z* 453.1 [*M* + 1]

#### EXAMPLE 4

##### ***N*-[Bis-3,4-(difluoromethoxy)phenyl]-*N*-(1-oxy-3-pyridylmethyl)-3-(2H-tetrazol-5-yl)aniline**

*N*-[Bis-3,4-(difluoromethoxy)phenyl]-*N*-(1-oxy-3-pyridylmethyl)-4-[2-(2-tetrahydropyranyl)-2H-tetrazol-5-yl]aniline (1.5 g, 0.26 mmol) was dissolved in THF (5 mL) and 3 mL of 1N HCl was added. After 6 h at room temperature, the mixture was neutralized to pH = 5 with saturated aqueous sodium bicarbonate and extracted with EtOAc (3 x 50 mL). The EtOAc extracts were combined, washed with brine (50 mL), dried (MgSO<sub>4</sub>), and concentrated *in vacuo*. The crude residue was loaded onto a RediSep column (10 g, silica gel) and the product was eluted using a linear gradient from 0% MeOH in EtOAc to 5% MeOH in EtOAc over 20 min to give 0.96 g of product as a white powder. <sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 8.48 (s, 1H), 8.21 (d, J=6.3Hz, 1H), 7.77 (m, 2H), 7.50 (d, J=8.0Hz, 1H), 7.4-7.3 (m, 2H), 7.12 (m, 2H), 6.9-6.8 (m, 2H), 6.51 (t, J=73.6Hz, 1H), 6.48 (t, J=73.6Hz, 1H), 5.08 (s, 2H). MS (ES): *m/z* 477.0 [M + 1]

#### EXAMPLE 5

##### **In Vitro Measurement of Type 4 Phosphodiesterase Inhibition Activity**

Human PDE4 was obtained from baculovirus-infected Sf9 cells that expressed the recombinant enzyme. The cDNA encoding hPDE-4D6 was subcloned into a baculovirus vector. Insect cells (Sf9) were infected with the baculovirus and cells were cultured until protein was expressed. The baculovirus-infected cells were lysed and the lysate was used as source of hPDE-4D6 enzyme. The enzyme was partially purified using a DEAE ion exchange chromatography. This procedure can be repeated using cDNA encoding other PDE-4 enzymes.

##### **Assay:**

Type 4 phosphodiesterases convert cyclic adenosine monophosphate (cAMP) to 5'-adenosine monophosphate (5'-AMP). Nucleotidase converts 5'-AMP to adenosine. Therefore the combined activity of PDE4 and nucleotidase converts cAMP to adenosine. Adenosine is readily separated from cAMP by neutral alumina columns.

Phosphodiesterase inhibitors block the conversion of cAMP to adenosine in this assay; consequently, PDE4 inhibitors cause a decrease in adenosine.

Cell lysates (40  $\mu$ l) expressing hPDE-4D6 were combined with 50  $\mu$ l of assay mix and 10  
5  $\mu$ l of inhibitors and incubated for 12 min at room temperature. Final concentrations of assay components were: 0.4  $\mu$ g enzyme, 10mM Tris-HCl (pH 7.5), 10mM MgCl<sub>2</sub>, 3  $\mu$ M cAMP, 0.002 U 5'-nucleotidase, and  $3 \times 10^4$  cpm of [<sup>3</sup>H]cAMP. The reaction was stopped by adding 100  $\mu$ l of boiling 5mN HCl. An aliquot of 75  $\mu$ l of reaction mixture was transferred from each well to alumina columns (Multiplate; Millipore). Labeled  
10 adenosine was eluted into an OptiPlate by spinning at 2000 rpm for 2 min; 150  $\mu$ l per well of scintillation fluid was added to the OptiPlate. The plate was sealed, shaken for about 30 min, and cpm of [<sup>3</sup>H]adenosine was determined using a Wallac Triflux®.

All test compounds are dissolved in 100% DMSO and diluted into the assay such that the  
15 final concentration of DMSO is 0.1%. DMSO does not affect enzyme activity at this concentration.

A decrease in adenosine concentration is indicative of inhibition of PDE activity. pIC<sub>50</sub> values were determined by screening 6 to 12 concentrations of compound ranging from  
20 0.1 nM to 10,000 nM and then plotting drug concentration versus <sup>3</sup>H-adenosine concentration. Nonlinear regression software (Assay Explorer®) was used to estimate pIC<sub>50</sub> values.

IC<sub>50</sub> values for the preferred compounds of the invention are less than 1000 nM,  
25 especially less than 100 nM.

#### **EXAMPLE 6 (Method A)**

Passive Avoidance in Rats, an in vivo Test for Learning and Memory

30 The test was performed as previously described (Zhang, H.-T., Crissman, A.M., Dorairaj, N.R., Chandler, L.J., and O'Donnell, J.M., *Neuropsychopharmacology*, 2000,

23, 198-204.). The apparatus (Model E10-16SC, Coulbourn Instruments, Allentown, PA) consisted of a two-compartment chamber with an illuminated compartment connected to a darkened compartment by a guillotine door. The floor of the darkened compartment consisted of stainless steel rods through which an electric foot-shock could be delivered  
5 from a constant current source. All experimental groups were first habituated to the apparatus the day before the start of the experiment. During the training, the rat (Male Sprague-Dawley (Harlan) weighing 250 to 350 g) was placed in the illuminated compartment facing away from the closed guillotine door for 1 minute before the door was raised. The latency for entering the darkened compartment was recorded. After the  
10 rat entered the darkened compartment, the door was closed and a 0.5 mA electric shock was administered for 3 seconds. Twenty-four hours later, the rat was administered 0.1 mg/kg MK-801 or saline, 30 minutes prior to the injection of saline or test compound (dosed from 0.1 to 2.5 mg/kg, i.p.), which was 30 minutes before the retention test started. The rat was again placed in the illuminated compartment with the guillotine door  
15 open. The latency for entering the darkened compartment was recorded for up to 180 seconds, at which time the trial was terminated.

All data were analyzed by analyses of variance (ANOVA); individual comparisons were made using Kewman-Keuls tests. Naïve rats required less than 30 seconds, on average, to cross from the illuminated compartment to the darkened  
20 compartment. However, 24 hours after the electric shock exposure, most rats pretreated with vehicle did not re-enter the darkened compartment; the average latency was increased up to 175 seconds ( $p < 0.001$ ). Pretreatment with MK-801 (0.1 mg/kg) markedly reduced this latency when compared to the vehicle ( $p < 0.001$ ). This amnesic effect of MK-801 is reversed in a statistically significant manner by actual test  
25 compounds in a dose-dependent fashion.

### EXAMPLE 6 (Method B)

#### Radial arm maze task in Rats, an in vivo Test for Learning and Memory

30 The test was performed as previously described (Zhang, H.-T., Crissman, A.M., Dorairaj, N.R., Chandler, L.J., and O'Donnell, J.M., *Neuropsychopharmacology*, 2000,

23, 198-204.). Five days after initial housing, rats (male Sprague-Dawley (Harlan) weighing 250 to 350 g) were placed in the eight-arm radial maze (each arm was 60x10x12 cm high; the maze was elevated 70 cm above the floor) for acclimation for two days. Rats were then placed individually in the center of the maze for 5 minutes with food pellets placed close to the food wells, and then, the next day, in the wells at the end of the arms; 2 sessions a day were conducted. Next, four randomly selected arms were then baited with one pellet of food each. The rat was restricted to the center platform (26 cm in diameter) for 15 seconds and then allowed to move freely throughout the maze until it collected all pellets of food or 10 minutes passed, whichever came first. Four parameters were recorded: 1) working memory errors, i.e., entries into baited arms that had already been visited during the same trial; 2) reference memory errors, i.e., entries into unbaited arms; 3) total arm entries; and 4) the test duration (seconds), i.e., the time spent in the collection of all the pellets in the maze. If the working memory error was zero and the average reference memory error was less than one in five successive trials, the rats began the drug tests. MK-801 or saline was injected 15 minutes prior to vehicle or test agent, which was given 45 minutes before the test. Experiments were performed in a lighted room, which contained several extra-maze visual cues.

All data were analyzed by analyses of variance (ANOVA); individual comparisons were made using Kewman-Keuls tests. Compared to control, MK-801 (0.1 mg/kg, i.p.) increased the frequencies of both working and reference memory errors ( $p < 0.01$ ). This amnesic effect of MK-801 on working memory is reversed in a statistically significant manner by the administration of actual test compounds in a dose-dependent fashion.

The preceding examples can be repeated with similar success by substituting the generically or specifically described reactants and/or operating conditions of this invention for those used in the preceding examples.

While the invention has been illustrated with respect to the production and of particular compounds, it is apparent that variations and modifications of the invention can be made without departing from the spirit or scope of the invention
